

Audit Report.

Lesotho, 2022

Foreword

umlaut has tested the quality of the Mobile Networks in Lesotho and took a detailed look into the performance of each operator.

The company is headquartered in Aachen, Germany and is a world leader in mobile network testing and benchmarking.

Measurement Overview

The leader in mobile benchmarking, umlaut, has analyzed the mobile networks in Lesotho with regards to mobile network performance.

We measured smartphone voice and data performance based on extensive drive tests.

This report has been commissioned by Vodacom, using our methodology. umlaut conducted its benchmarking exercises in Lesotho with predefined routes provided by Vodacom Lesotho.

The audit was done as a performance benchmark performed by umlaut between 28.04.2022 and 02.05.2022 in cities and towns as well as on connection roads.

Dedicated measurements have been executed as drive tests outdoors using a Samsung Galaxy S20 Ultra device. All data measurements have been performed in 4G preferred mode. Voice measurements have been done in 4G/4G preferred mode on both sides, while call origin has been alternated.

In addition crowdsourced performance data has been collected and evaluated between CW51 2021 and CW22 2022.

The following pages provide a comparative overview about the performance results observed for the different tested service types.

Methodology

The leader in mobile benchmarking, umlaut, has analyzed the mobile networks of Lesotho with regards to mobile network performance. We measure smartphone voice and data performance based on extensive drivetests – from major metropolitan areas to smaller cities and connection roads.

We objectively define the routes and test methodology and publish the results through certificates or public benchmark reports. As the de–facto industry standard, our benchmarking methodology focuses on customer–perceived network quality and covers a wide range of mobile services. Today, more than 200 mobile networks in more than 120 countries are being evaluated by our unique scoring methodology. It allows a technical analysis that is unpre–

cedented in its level of detail and enables comparisons between the network performance and capability of each mobile network. Our public benchmarks as well as the certificate benchmarks help network operators to demon–strate how well they are delivering wireless connections to consumers, business users and enterprises and reveals the areas of improvement.

Key takeaways

- ||| Vodacom achieves the highest umlaut score with 509 out of 1000 points in the nationwide assessment in Lesotho.
- ≡ In the voice category as well as data performance, Vodacom leads with the highest score.
- ≡ Vodacom shows the best user experience for web browsing and YouTube services.
